# SemEval-2013 Task 9: DDI Extraction

SemEval 2013

Dataset

Course Plan

- **SemEval** - International Conference on Semantic Evaluation. Several tasks or challenges are posed every edition
- **SemEval 2013 Task 9: DDIExtraction** - Detect drug names and interactions among them described in text.
- **Documents** - Documents extracted from DrugBank (Drug description leaflets database) and MedLine (abstracts of medical papers)
- **Participants** - 11 research teams from around the world (1 Cuba, 1 Italy, 1 Finland, 2 Germany, 1 Portugal, 2 Spain, 3 USA)
- **Subtasks**
  - Drug name recognition and classification (NERC)
  - Drug-Drug interaction recognition and classification (DDI)

Course Plan

- **Session 1:** Develop a rule-based baseline for Task 9.1 - Drug NERC
- **Sessions 1-2:** Develop a ML-based system for Task 9.1 - Drug NERC
- **Delivery of NERC systems**
- **Session 3:** Develop a rule-based baseline for Task 9.2 - DDI detection
- **Sessions 3-4:** Develop a ML-based system for Task 9.2 - DDI detection
- **Delivery of DDI systems**
- **Sessions 5-7:** Develop DNN alternatives for Tasks 9.1 and 9.2
- **Delivery of DNN alternatives**

**Lab project must be developed in teams of 2 people**

- **Warning 1:** Lab sessions may not be enough. You'll probably need to work on the assignments at home.
- **Warning 2:** Even if you can complete the work in class, sessions are every other week, so you may forget what you were doing... It is good that you do work a bit at home to get things freshened-up
